

UCEL Hoses

Rubber hoses are representing a higher complication if compared to other spare parts in the car in terms of specifications and use. Many rubber hoses look the same and have the same measurements but they do not necessarily serve the same purpose, as the components of these items differ widely from an application to another.

Some of the applications that necessitate a careful choice of rubber hoses are:

- Coolant system hoses
- Hydraulic hoses
- Transmission hoses

These rubber parts are crucial to an operation vehicle, making it efficient and smooth on the road. Other applications of rubber hoses may include: air brake hoses, air conditioning hoses, automotive exhaust hoses, power steering hoses...

UCEL RUBBER supplies the auto-parts aftermarket with high quality spare parts made in Turkey and supplies to 60 countries in 4 continents. Our partners respect the commitment we have for producing high performing parts.

UCEL supplies rubbers hoses that are made of carefully chosen raw materials from trusted suppliers in Turkey and abroad.
